

IT Audit Findings Report

Finding ID	Control Area	Finding Title	Observation	Risk/Impact	Severity	Recommendation	Management Response	Action Owner	Due Date	Status
F-001	Password Management	Password Complexity Requirements Not Enforced	During testing, password complexity requirements were found to be disabled, allowing users to create weak passwords.	Weak passwords increase the risk of unauthorized access and account compromise.	High	Enable password complexity requirements and increase the minimum password length in accordance with the organization's security policy.	Management agrees with the finding and will update the Group Policy settings.	IT Manager	2025-09-30	Not Started
F-002	Backup & Recovery	Backup Restoration Testing Not Performed	Although backups were completed successfully, no documented restoration tests had been performed within the last 12 months.	The organization may be unable to recover critical systems or data following a disaster or ransomware incident.	High	Perform and document quarterly backup restoration tests to validate backup integrity.	Management will schedule quarterly restoration tests and maintain documentation.	Infrastructure Manager	2025-10-15	In Progress
F-003	Endpoint Security	Antivirus Definitions Not Consistently Updated	Testing identified several endpoints with outdated antivirus definitions.	Outdated antivirus software increases the likelihood of malware infections and ransomware attacks.	Medium	Enable automatic antivirus updates and monitor endpoint compliance on a regular basis.	Management will implement automatic updates through the endpoint management platform.	Desktop Support Manager	2025-08-31	Not Started
F-004	Disaster Recovery	Disaster Recovery Plan Not Tested Annually	The disaster recovery plan exists but has not been tested within the past year.	An untested recovery plan may not function effectively during a real disaster, resulting in prolonged business disruption.	High	Conduct annual disaster recovery exercises and document the results for management review.	Management will conduct an annual disaster recovery exercise beginning this year.	Infrastructure Manager	2025-11-30	Not Started
F-005	User Access Management	Termination Process Operating Effectively	Testing confirmed that terminated employee accounts were disabled within 24 hours in all sampled cases.	The risk of unauthorized access from former employees is appropriately managed.	Low	Continue performing monthly user access reviews and maintain current controls.	Management will continue the existing process.	IT Operations Manager	2025-12-31	Good
F-006	Change Management	Formal Change Approval Process Operating Effectively	All sampled system changes contained documented approvals prior to implementation.	Approved changes reduce the risk of unauthorized or unstable system modifications.	Low	Continue following the formal change management process and retain supporting documentation.	Management will continue monitoring compliance.	Change Manager	2025-12-31	Good
F-007	Network Security	Firewall Rule Reviews Operating Effectively	Quarterly firewall rule reviews were documented and obsolete rules had been removed.	Regular reviews reduce unnecessary network exposure and strengthen security.	Low	Continue quarterly firewall rule reviews and document all changes.	Management will continue the existing review schedule.	Network Administrator	2025-12-31	Good
F-008	Logging & Monitoring	Security Log Monitoring Operating Effectively	Daily monitoring of security logs and SIEM alerts was consistently performed.	Continuous monitoring improves the timely detection of security incidents.	Low	Continue daily log reviews and investigate alerts promptly.	Management will maintain the current monitoring procedures.	Security Operations Manager	2025-12-31	Good
